E. Humphreys, K. Naemura, M. Ohlin, M.-C. Kang, K. Rannenberg, WG-
Conveners

MEDIUM: Livelink-server

NO. OF PAGES: 1 + 1 + 2 (Attachment 1)

BACKGROUND

At the WG 3 meeting in Lucerne, October 2007, the German National Body raised its concern that certain proposed privacy functional components had not been included in new text for 15408-2. WG 3 confirmed its previous response that a majority of experts in WG 3 could not support the inclusion of such components. However, WG 3 also accepted that the security concerns addressed by the proposed components are valid and should be addressed by IS 15408 in an improved way in the future.

With respect to the privacy functional components that had not been accepted for inclusion in the current version of 15408-2, WG 3 resolved to hold a Drafting Meeting to consider and document possible extensions to the evaluation criteria that would enable such negative functional requirements to be expressed as architectural properties of a TOE as a whole, and evaluated as such.
